

Gideon Twenenboah

Full-Stack Developer — Real-Time Web Systems

SUMMARY

Full-stack developer building under the name Vigileon Codebase. I design and build complete web platforms end to end — real-time systems, payment integrations, and admin tooling — not isolated demos. I also build small, focused tools that solve real problems I've seen firsthand.

PROJECTS

Vigileon League

Ranked leaderboards, paid tournaments, and 1v1 cash challenges for eFootball & Call of Duty players — built and operated solo.

- Ranked leaderboard, per-tournament standings and brackets
- 1v1 cash challenges with configurable platform fees
- Live "who's online" presence; peer-to-peer WebRTC voice calls with real incoming-call ringing
- Paystack-integrated entry fees, payouts, withdrawal review workflow
- Full admin dashboard: analytics, moderation, content management, flyer generator
- Installable PWA with live update-available detection

Firebase (Auth/Firestore/Realtime DB/Storage/Messaging) · WebRTC · Netlify Functions · Paystack API · EmailJS · PWA · Vanilla JavaScript

My WiFi

Turns a paper exercise book of WiFi voucher codes into a proper point-of-sale app — built for a real problem in Gideon's own village.

When Gideon returned to his home village, the local MTN network was unstable, so vendors resold WiFi access — tracking every voucher code by hand in an exercise book. My WiFi replaces that book: photograph a sheet of codes and it reads them automatically, then tracks stock, sales, and earnings.

- On-device code recognition from a photo, with manual correction before saving
- Local-first — data never leaves the phone; manual backup/restore
- Live stock, all-time sales, and all-time earnings
- Free forever, no account; optional PIN lock

Progressive Web App · On-device OCR · Local-first storage · Netlify

SKILLS

Frontend

Vanilla JavaScript at production scale, responsive layout systems, canvas-based graphics generation, Progressive Web App builds.

Real-Time Systems

Live presence tracking, WebRTC peer-to-peer audio with custom signaling, push and in-app notification pipelines.

Backend & Data

Firebase (Auth, Firestore, Realtime Database, Storage, Cloud Messaging), serverless functions on Netlify with the Firebase Admin SDK.

Payments & Growth

Paystack integration for real money movement, referral and social-share mechanics, admin tooling for non-technical operators.
